

We are your partner  
with the powerful flame-weeding technology  
for a future without herbicides.

**The thermal weed removal.**

Environmentally friendly. Efficient. Safe.

## Unique burner technology. Made in Germany.

As the leading manufacturer in the field of flame-weeding technology in Europe, we offer the most effective burner technology in this business. Whether in gardening and landscape management, in agriculture and horticulture, in municipal use or for the care of surfaces in the private or commercial sector. With our extensive product range, professional weed removal is practicable, economical and environmentally friendly.

With our unique and innovative burner technology, temperatures of almost 2.000 °C are reached. The efficiency is very high and the combustion is completely residue-free.

Our weed burners are ideal not only for the implementation of the herbicide ban in all ways and places. In agriculture, in horticulture and in special crops, our weed-burners also does an excellent job – as well in pre- and also in post-emergence process.

Take advantage of our many years of experience in flame-weeding technology! Since 1973 we develop and produce innovative quality products “Made in Germany” with high performance, low consumption and long life.

### Inform now!

More information about our device program with technical details you can be found at [www.abflammtchnik.de](http://www.abflammtchnik.de).

Or contact us directly.

## The more efficient method.

Our weed burners produce an absolutely uniform heat distribution over the entire working width. The generated flame temperature is approx. 1.925 °C. The plant parts are not burned, but by the abrupt and brief heating to at least 70 °C, the cell walls burst. The cell structure of the wild herbs is thereby destroyed and they die off. Due to the edge-sharp heat delimitation of our high-performance burners, a very precise and targeted work is possible.

### Environmentally friendly

Through the use of the flame-weeding technique can be completely dispensed with chemical agents.

### Efficient

Our unique burner technology achieves the maximum possible flame temperature of 1.925 °C with propane gas.

### Comfortable

Our high-performance-burners produce an always controllable, wind-proof and stable flame with a laterally sharp edge of heat.

### Clean

Through an optimal gas-air mixture, we achieve a completely residue-free combustion, with a high efficiency at low consumption and long life.

### Sturdy + maintenance

Because of our reasoned and purely mechanical gas-air mixture, we can do without a failure- and repair-prone forced air supply.

### Great product range

From portable weed burners to mobile weed burners up to attached mountable weed burners. Our product range includes about 150 different device variants.
