The environmentally sound weed removing.

For commercial & private purposes
In public & private landscaping

Reinert 
Metallbau GmbH

Break new ground.

Set new environmentally standards for weed removing

Preservation of the nature is our task. Please also contribute to this.

We must all break new ground to ensure an environmentally sound interaction between man and nature

With Reinert flame weeding chemical pesticides can be completely dispensed with. This is our claim

By using the flame weeding you contribute to an intact ecosystem by natural means.

Innovative Technologie. Made in Germany.

- environmentally sound
- efficient, clean + free of residue
- easy handling
- comfortable
- robust + maintenance low

Unique burner technology.

As the leading manufacturer in the field of thermal weed removing in Europe, we offer the most effective burner technology among all industry partners.

With our device program we make the alternative weed removal possible in practical, economical and environmental manner.

Our product range includes innovative and professional solutions for the following areas:

- Agriculture and horticulture,
- Gardening and landscape maintenance,
- Landscaping of commercial, municipal and private sectors.

Due to our unique burner technology there can be produced the maximum possible temperatures of 1.925°C with propane gas. An optimal gas-air mixture ensures a completely residue-free combustion.

The more efficient method.

With using this method the plant parts are not burned, but the rapid increase of temperature to at least 70 °C causes the bursting of the cell walls.

The cell structure of the wild herbs is thereby destroyed and the cells die.

The laterally sharp heat protection of our high-performance burners makes a very precise and targeted work possible.

The use of our device technology is easily possible on all court surfaces.

For example on paved areas, water-bound paths and squares or on cinder tracks and pitches.

The regrowth is reduced. Seeds and root systems are destroyed.

Large product range.

On the following pages you will find an excerpt of our product diversity.

From a portable hand-held through a manually-operated device up to a surface-mounted flame-retardant device – we can offer the individual device for you for each application and every size of surface.

Take advantage of our many years of experience in flame technology!

Since 1973 we develop and produce innovative quality products with high performance, low consumption and long lifetime.

Environmentally sound, efficient and safe.

T 111 K

Portable flame weeding device

The light, quick moving professional flame weeding device with transport cart for a 11 kg gas bottle.

Universally and lightly applicable for smaller surfaces in all areas.
This device is characterized by a simple and uncomplicated use.

Depending on the requirements it is available in three different working widths: Either in 100, 130 or 160 mm

K

T 105 R

Portable flame weeding device

The small flame weeding device with back carrying rack is suitable for a 5 kg gas.

It is simple to handle and Es ist einfach in der Handhabung and applicable in places with difficult access.

Available depending on the working widths (100, 130 or 160 mm).

X 500 S

Mobile flame weeding device

Professional, light and flexible. For private, municipal and commercial use.

Equipped with high performance pole burners which have a working width of 50 or 60 cm. Low gas consumption and easy handling.

Reinert flame weeding.
The trend-setting and
gentle maintenance of
deverse surfaces.

X 1050 S (manually movable)

Mobile flame weeding device

The efficient and powerful weeding devices. Optionally available with or without traction drive.

The efficient and powerful weeding devices. Optionally available with or without traction drive.

Suited for a large area of applications in private and public landscaping. Also suitable for commercial and private purposes.

Perfectly applicable on all water-bound paths and places, paved areas, kerbs, cinder tracks and pitches, as well as cemeteries and parks.

Available depending on the working widths (60, 80 or 100 mm). With traction drive also available in 120 or 150 cm.

environmentally conscious
manner.**

X 1050 A

X 1050 A (with traction drive)

Mobile flame weeding device

Precise and targeted work
by sharp heat protection.

X 1000 H

Mounted flame weeding device

The compact and robust device as alternative to the three point tractor attachment.

Hydraulically adjustable on both sides over a range of 40 cm for off-center use. The efficient and professional technique for rear and front attachment.

Targeted and effective surface treatments possible in different working widths.

Available in 100, 120, 150, 180 or 200 cm.

X 1000 F / X 2000 F

Mounted flame weeding device

The reliable and strong flame weeding device for the front attachment.

The burner unit of the tractor is mounted in the front and is laterally adjustable over a range of 40 cm.

The gas supply is separately mounted to the three-point rear attachment and consists of individual gas bottles (X 1000F) or a gas tank (X 2000 F).

Available in the working widths 100, 120, 150, 180 or 200 cm.

X 211 SI

X 211 SI

Mobile flame weeding device

This infrared flame weeding device was designed for full-surface treatment.

Equipped with non-breakable infrared heaters from stainless steel, it complements our wide range of devices.

Available in the working widths 50 or 75 cm.

X 2000 AS

X 2000 AS

Mounted flame weeding device

The extraordinary and high-performance flame weeding device which can be mounted to all cantilever arms.

Specially designed for demanding and hard to reach application areas.

Available in the working widths 100, 120,

Reinert flame weeding.
Clean, efficient and absolutely environmentally sound.

„Already accomplish today
what others not think about until tomorrow.“
